Wear Protection Ceramic Liners

Protect your investment and increase the lifespan of your equipment. Buffalo Wire liners reduce down time and cost per ton produced.

Our liners withstand all heavy, abrasive, sharp pointing loads and high impact solutions.

Applications

Panels are available in three styles for different applications.

- Ceramic panels
- Rubber panels with ceramic
- Hexagonal blocks self-adjustable to any surface

Panels with high Alumina content (92% or more) and corrosion resistance are used to cover pipes before chutes and material transfer zones.

Rubber panels are widely used in highly abrasive areas with moderate impact.

Installation

Buffalo Wire liners are either glued onto the surface or screwed in for best protection.

Specifications

Standard ceramic panels are 6"x4" x1/2" and 6"x6" x1/2"

Rubber panels with ceramic are 1'x1'

All can be cut to fit your needs
