While other products are blinded
CleanSlot Focuses
 on your bottom line.

Ask anyone using traditional screen media: **What's the nastiest problem you dread?** And they'll probably answer in one word: **Blinding.** It's a huge production headache reminiscent of the old days at home when you spent all afternoon defrosting the refrigerator! Now Buffalo Wire Works introduces the first truly "self-cleaning" screen – **CleanSlot™** which greatly reduces your blinding woes. In addition to all the hassles and drudgery you'll avoid, CleanSlot actually helps both you and your company's bottom line look a whole lot better in many ways: Less production time in "stop and clean" work, more consistent product quality output, less cost per ton output.

CleanSlot's unique design promotes more lively product action.

CleanSlot is a standout performer when processing **high moisture materials**, giving you consistent performance even in adverse conditions. CleanSlot is ideal for jobs requiring de-sanding and quick elimination of fines for asphalt chip production. It has proven successful in producing manufactured sand, slag, ag-lime and lightweight aggregates.

Don't Be Blinded by Lost Production Time.

The exclusive anti-blinding properties of CleanSlot can eliminate most of the lost production time you face when you have to stop and clean your screens. With less downtime, productivity soars and you can produce a consistent quality product at a lower cost per ton.

A New Dimension in "Self-Cleaning."

Take a close look at the unique three-dimensional weave of CleanSlot. It is made of an exclusive mixture of straight and crimped wires arranged on two different planes. In the screening operation, the crimped wires absorb energy and vibrate rapidly. Unlike a traditional flat weave, this vibration provides a "self cleaning" action. The 3-dimensional wire causes the material to aggressively tumble over the wire for superior product cleaning action and promoting stratification of the particles.

Don't Wait to End Your "Blinding" Headaches!

Try CleanSlot in your own operation today. End the hassles of screen blinding. See for yourself how it can give you more consistent screening quality—even with high moisture materials—and greatly reduce your maintenance downtime. Contact us today **800-828-7028** with your blinding problems and let us start improving your peace of mind, your product quality... and your bottom line.

A word FROM OUR customers

INCREASED YIELD

“ CleanSlot™ did a super job for us in producing 10mm minus natural sand. Before we were producing only 70 tons per hour using a stainless Z-Slot. Then we changed over to a high carbon CleanSlot from Buffalo Wire and we produced up to 200 tons per hour. This most definitely cut our cost—possibly by half. The special shape of the curved wire gave the screen a *wang* that greatly increased the screen action. ”

Jeff Witt,
 Maintenance Supervisor
 Ted Ondrick Co.

NO MORE CLEANING

“ We were so happy with the high carbon CleanSlot™ that we threw away our brand new high carbon Z-Slot screens! We often manufacture 10mm minus sand. Blinding with the Z-Slot made us clean the deck at least four times daily. With CleanSlot we found that no cleaning was required. The wasted time saved in cleaning was fantastic! ”
