Wear Protection

Protect your investment. Increase the lifespan of your equipment, and protect them against damages. Reduce down time, and cost by the ton produced.

These plates receive all heavy, abrasive and sharp pointing loads. High impact solutions

CERAMIC LINER

Used In extreme abrasive applications, especially with high fine material content.

Applications:

Panels with high Alumina content $\geq 92\%$, and corrosion resistant are used to cover up pipes that are before chutes, and material transfer zones etc

Available in 3 styles for different applications:

- a) Ceramic panels
- b) Rubber panels with ceramic, widely used in highly abrasive areas with moderate impact.
- c) Hexagonal blocks self-adjustable to any surface.

Installation:

Glued on to the surface to protect, and the rubber panels are screwed in the surface to protect.

Availability:

Standard ceramic panels of 6"x4" x1/2" and 6" x 6" x 1/2"

Rubber panels with ceramic of 1 x1 Ft

Can be cut to fit your needs
